LED Illumination

Direct illumination with super-bright, wide-viewing angle LED's provides a significant reduction in operating costs due to their very low power consumption and long life. Offering the benefits of full size messages in a compact package that's viewable in direct sunlight. All dual-message units have super-imposed characters. Each message is controlled separately. Construction consists of a single piece extruded aluminum slim-line frame that makes installation quick and easy. UL/CUL approved for outdoor and indoor applications. With a life expectancy of over 100,000+ hours, and an average power usage of only 6 to 13 Watts, these signs will literally pay for themselves in a very short amount of time. We can also offer you custom messages in LED's.

TC Neon & TCU Incandescent Illumination

TC 1418W-Logo

Backlighting with neon (TC Series) or incandescent (TCU Series) provide bright and reliable light sources for these internally illuminated signs. That brightness coupled with a proprietary sunscreen and provides readability in direct sunlight. Messages are blanked out when off preventing confusion. These corrosion resistant, low maintenance signs have been designed for easy installation. Neon illuminated (TC Series) signs have a life that can exceed 50,000+hours which greatly reduces maintenance and replacement costs. Our incandescent (TCU Series) feature specially designed traffic signal lamps that have a life expectancy of 10,000-hours.

Durapanel

DuraPanel is designed to provide a solution for non-illuminated identification and directional information needs. Utilizing an extruded aluminum frame with concealed fasteners provides an extremely versatile and vandal-resistant unit that is ideal for both outdoor and indoor applications. Sizes can range from 6" x 12" to as large as 48" x 192" and are only 1.25" deep. Using high performance vinyl overlays provides limitless graphical capabilities and adds the finished look to your installation site.
